DETAILED ACTION**EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with David R. Metzger on September 28, 2007.

The application has been amended as follows:

Claim 9 has been cancelled.

In claim 1, lines 9 and 17, claim 4, lines 8 and 17 and claim 6, lines 10 and 19, the word "resister" has been changed -resistor--.

In claim 1, line 2, after "devices", -being light emitting diodes--has been added.

In claim 4, line 11, after "circuit", "for" has been deleted.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: The prior art fails to disclose the recited limitations:

"a bypass circuit including (a) a plurality of thyristors, each of which is connected in parallel with a respective one of said series connected light emitting diodes, and (b) a gate potential setting circuit; a switching device for pulse width modulation; and a resistor connected in parallel with said switching device for pulse width modulation, wherein, said gate potential setting circuit provides to said thyristors a gate potential value such that, when said series connected devices are operating as normally, said thyristors are in the off state, said gate potential setting circuit provides to said thyristors another gate potential value such that, when said series connected devices are in the open state, said thyristors are on, and said resistor is coupled to said pulse width modulating constant current driving circuit such that current for maintaining the on state of a turned-on thyristor flows through said resistor" (claims 1, 4 and 6); or "a bypass circuit or gate potential setting circuit having a plurality of thyristors; a plurality of voltage dividers each of which is coupled in parallel with a respective one of said thyristors; voltage dividers comprising operatively coupled resistors; and a plurality of series connected light emitting diodes, wherein, each voltage divider is connected to the gate terminal of its respective thyristor and supplies a gate potential value to the thyristor such that the thyristor is turned off during normal operation of said series-connected light emitting diodes and turned on when said series- connected light emitting diodes are open-circuited" (claims 8 and 10). Hence, the examiner has allowed claims 1, 4, 6, 8 and 10. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Madhani et al., Patent No. 7,042,165.
